

Wings, Stings and Wriggly Things!

The grounds of St Michael's are crawling with life! Over the next half term, we will explore our spectacular school grounds and discover the creatures that make it their home, focusing on the various habitats and their conditions. Compare the effectiveness of different bug hotels, create information leaflets on different habitats and write amazing descriptions based on The Tin Forest. We will also work with a range of materials to create a 3-D plant or minibeast sculpture!

During this topic, Year 4 will be exploring our school grounds to discover the creatures that make it their home. As we will be spending a lot of time outdoors, please ensure your child has a *waterproof coat and suitable footwear in school every day.*

HOME LEARNING PROJECT

Design your own super insect and write a fact file about it. See further details in Home Learning Logs.

Children will be working in groups to compare different bug hotels - which one will attract the most wildlife?

You're invited to come and see our fantastic learning at Year 4's topic outcome on May 25th from 2:30-3:00!
